

ABSTRACT OF THE DISCLOSURE

An electronic apparatus and a multi-functional telephone apparatus in which system data can be set efficiently using plural pictures irrespective of whether the setting is new A 5 relevant information table unit 141 includes a menu table 142 for demonstrating a menu for setting a multi-functional telephone apparatus on a display, not shown, plural data-related tables 143 for demonstrating constituent elements for each setting and a system data table 144 for demonstrating the 10 contents of respective system data. The three tables 142 to 144 are related to one another by a pointer 145. Thus, a desired item is selected from the menu, and a desired SDID is selected from the groups displayed in the data-related tables 143 lying on its lower order side to set corresponding system data.
